Expecting a slide

Softer price entering the last 4 months of FY22

The global palm oil price rally has slowed down after reaching a record high in the 1H22. We believe that this is mainly driven by Indonesia's initiative to reduce its high inventory level by rising the DMO multiplication to 1:9 (previously at 1:7) and to boost export by giving incentives for palm oil exporters in the form of export levy exemption. **We are sticking to our FY22F CPO price assumption at MYR5,000/MT**, meaning that CPO prices for the last 4 months in FY22 will stay at approximately MYR3,800/MT considering 1) **the ample production of overall vegetable oil** from seasonality peak harvest coupled with overall good weather in 2020 and 2021 due to gradual absence of La Nina's impact, 2) downward price pressure from **high CPO inventory level in Indonesia and Malaysia**, and 3) **impaired palm oil import demand from China** as the country is facing a prolonged lockdown.

Lower export duty threshold to impact 8-13% FY23F earnings

Ministry of Finance adjusted the floor and ceiling price of export tax duty to <USD680/MT (from <USD750/MT) and >USD1,430/MT (from >USD1,500/MT), respectively. This regulation was effective from 9Aug2022 and we would see lower revenue and earnings performance for CPO players under our coverage starting 2023. Assuming that the government does not change the export levy rate in 2023 and using our price before tax assumption of MYR3,500/MT in FY23, **we would see 8-13% lower earnings performance for CPO players** under our coverage starting FY23F given the new tax regulations. Subsequently, we projected a **~11% lower ASP (net of tax) for FY23F at MYR3,100/MT (-18% YoY)**.

Sufficient biodiesel fund amid export levy exemption extension

We calculate that biodiesel fund collected from the export levy amounted to ~IDR37tn in 1H22 and fund needed to cover the price spread between domestic CPO price and oil price stood around ~IDR26tn in the same period. On July22, we finally see that the price spread has flattened to only IDR124/lt due to the normalizing domestic CPO price and we estimate the fund needed on 2H22F will decrease to around IDR5-9tn. There should be **no problem to run the biodiesel B35 program should the government decide to extend the export levy exemption until end of 2022**.

Downgrade to Neutral call on the sector

We downgraded our sector call to **Neutral** with preference to CPO players with 1) younger plantation portfolio as it would provide a strong volume growth entering prime age to offset the lower CPO prices in FY23F and going forward, 2) awareness towards ESG, and 3) strong ROE generation. We have a buy call on TAPG, SSMS, and DSNG and hold call on LSIP and AALI.

I. Softer price outlook entering last 4 months of FY22

After setting a new high in the 1H22, the worldwide price surge for palm oil is on reversal trend. We think that the primary driving force behind this is Indonesia's initiative to reduce its high inventory level by rising the DMO multiplication to 1:9 (previously at 1:7) and to boost export by giving incentives for palm oil exporters in the form of export levy exemption until 31Aug2022. Following that, Ministry of Finance adjusted the floor and ceiling price of export tax duty to <USD680/MT (from <USD750/MT) and >USD1,430/MT (from >USD1,500/MT), respectively. This regulation went into force on 9Aug2022.

On the flip-side, government has decided to extend the export levy exemption until 31Oct2022 under PMK130/2022. Government's decision to extend the export will be a windfall for CPO players albeit the small-time window. We believe that extending the export levy exemption will give positive sentiment for CPO players to export and help clear the oversupply as currently ending stock on 6M22 stood at 6.7mn tonnes where usually it stays around 3-4mn tonnes. After a total of 3.5 levy-free months (15July2022-31Oct2022), we will see a higher levy implemented starting 1Nov2022.

Table 1. Changes in CPO export duty and levy

New export duty, effective 9 Aug 2022

Source: KISI, MoF

The price has hit the peak in 1H22 with an average of MYR6,300/MT and given the price movement in July2022 and August2022, we expect CPO prices to normalize to MYR3,800 for the last 4 months of FY22. Supply-wise, vegetable oil is about to reach its seasonal peak harvest coupled with overall favorable weather in 2020 and 2021 as a result of the effects of La Nina's receding in countries in Northern Hemisphere that produce soybeans. We expect pressure from high soybean output, as according to USDA, soybean production may hit a record in FY22/FY23F with a total production of 391.4mn tonnes (up by 11% YoY) should the favorable weather conditions persists until the end of 2022.

Table 2. Global soybean output (Sept-Aug)

(in mn tonnes)	FY13/14	FY14/15	FY15/16	FY16/17	FY17/18	FY18/19	FY19/20	FY20/21	FY21/22	FY22/23F

Source: KISI, USDA

Malaysia's palm oil inventory is expected to hit a 3-year high of 2.03 million tonnes (15% MoM) in August2022 while facing fierce competition as Indonesia eased its export ban. The rise in palm oil production to 1.7 million tonnes (+8% MoM), reaching a 10-month high, and the mild palm oil export to 1.32 million tonnes (down 0.14% MoM) were also the key factors contributing to the larger CPO inventory.

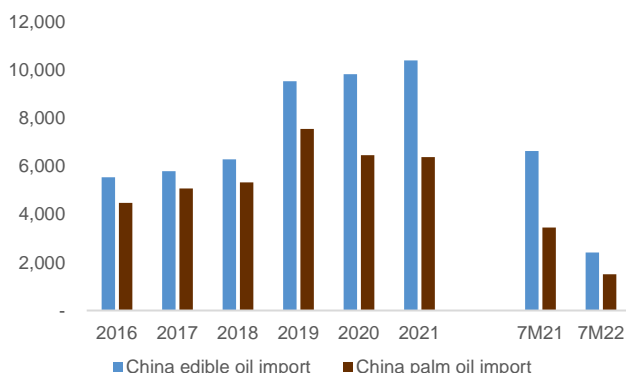

Fig 1. Malaysia palm oil monthly data

Source: KISI, MPOC

On the demand side, we have to take a look at leading palm oil consumers and most populous countries, China and India. China's strict zero covid policy has led to continuous restrictions and lockdowns, which negatively impact overall economic activity. According to the Chinese business portal Caixin, currently, 33 cities in China are under partial or full lockdowns including economic powerhouses and tech hub such as Guangzhou, Shenzhen, and Chengdu. Areas under lockdown accounted for 35% of total GDP, disrupting activities of ~65mn people. Figure 1 shows that China's overall edible oil and palm oil import has been cut by more than half. Based on its 7M22, we believe that China's vegetable oil demand will remain much lower than last year, especially faced with a prolonged lockdown.

Fig 2. China vegetable oil import

Source: Bloomberg, KISI

Fig 3. India vegetable oil import

Source: Bloomberg, KISI

India has two-thirds of its edible oil consumption fulfilled through imports of soybean oil (from Argentina, and Brazil) and palm oil (from Indonesia and Malaysia). In late May 2022, India allowed duty-free imports of 2mn tonnes each of soybean oil and sunflower oil in order to curb local edible oil prices. This government-issued quota is valid for the current fiscal year and the following fiscal year, both of which finish on March 31. CPO is nevertheless subject to a 5.5% duty rate. The price spread between soybean oil and CPO, however, hit a 10-year-wide record, as can be observed in Figure 3. The current spread is at ~USD726/MT, while the 10-yr average spread stood at USD131/MT, giving a huge discount on CPO price as compared to soybean oil which would make palm oil purchase a more preferable option. This is reflected by India's monthly palm oil import on August2022 which nearly doubled to 1.03mn tonnes while soybean oil import decreased by half to just 240,000 tonnes. India's preference shift in favor of CPO ought to increase price pressure and aid in clearing Indonesia's soaring inventory.

Table 3. India vegetable oil duty rate

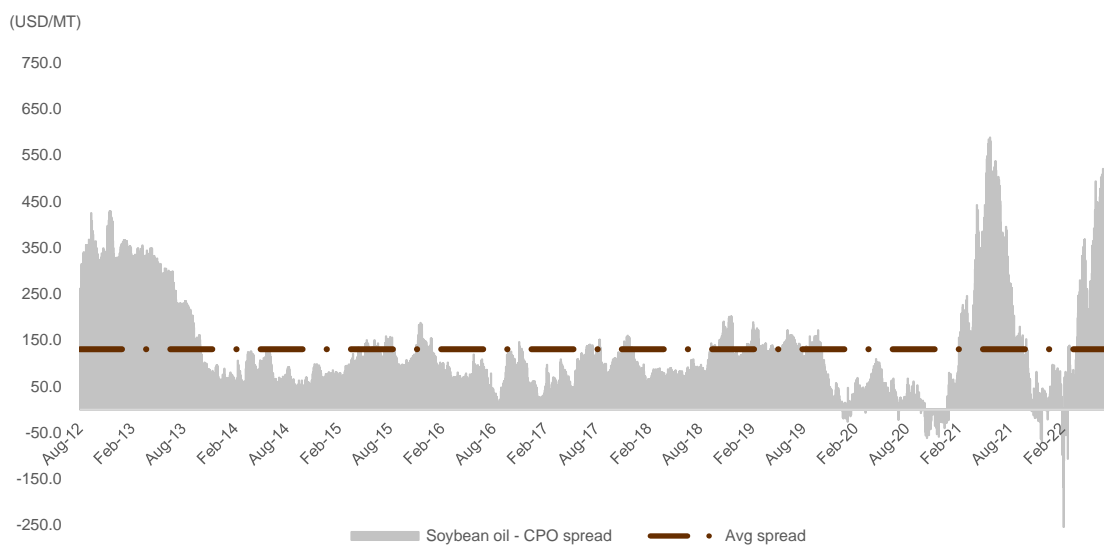

Edible oils import duty	24-May-22	13-Feb-22	20-Dec-21	11-Sep-21	20-Aug-21
Crude Palm Oil	5.50%	5.50%	8.25%	24.75%	30.25%

Source: KISI, The Solvent Extractors' Association of India

Looking back on the historical spread 10 years ago, we can see that when the spread reached around 500USD/MT, there was a switch in demand toward CPO, which causes the price spread to narrow (Aug2012-Aug2013 and Mar2021-Sep2021). Following the seasonality, both China and India will stock up ~1-2 months ahead of festivals such as

Mid-Autumn festival on the third week of September, China's National Holiday on the first week of October, and India's Diwali festival on the last week of October. Given that both parties must stock up before festival days, the spread has not yet begun to close as CPO prices kept being pummeled down by the flooding supply from Indonesia and Malaysia.

Fig 4. Soybean oil- CPO price spread

Source: KISI, Bloomberg

We are sticking to our FY22F CPO price assumption at MYR5,000/MT, meaning that CPO prices for the last 4 months in FY22 will stay at approximately MYR3,800/MT in light of the following factors; 1) **the ample production of overall vegetable oil** from seasonal peak harvest coupled with overall good weather in 2020 and 2021 as a result of La Nina's impacts subsiding, 2) downward price pressure from **high CPO inventory level in Indonesia**, and 3) **impaired palm oil import demand from China** as the country is facing a prolonged lockdown.

II. Regulation impact on FY23 assumptions

Our FY23F CPO price before tax assumption is MYR3,500/MT (from previously MYR2,800/MT) considering: 1) the ongoing conflict between Russia and Ukraine which led to sunflower oil supply cut, tightening the global vegetable oil supply balance, 2) rising fertilizer price and difficulty to secure its supply, and 3) labor shortfall in Malaysia which remains unsolved. Though, we would see lower earnings performance for CPO players under our coverage in FY23F onwards given the new tax regulations. We projected a ~11% lower ASP (net of tax) for FY23F at MYR3,100/MT (-18% YoY).

The following sections show the summary of changes and recommendations for CPO players under our coverage:

Sawit Sumbermas Sarana (SSMS) – Maintain BUY call with a lower TP of IDR1,780/sh (from previously IDR2,040/sh), offering 40% upside. We utilize DCF valuation with a WACC of 13.3% and our new TP implies 6.4x FY22F PE (close to its 3-yr mean), 38% FY22F ROE, and EV/Ha of USD19,863/Ha in FY22F. We view that SSMS should be trading at a premium valuation given its (i) prime age profile and having the best FFB yield among Indonesian plantations, (ii) strong ROE generation, and (iii) its compliance with ESG.

Factoring in the new export duty regulation, we readjust FY23F revenue to IDR5.8tn (lower by 5%) and GPM at 52.1% (from 54.7%). Earnings also changed significantly lower by 13% to IDR2tn in FY23F.

Table 4. SSMS's tax change impact to earnings

Assumptions	Unit	Revised		Previous		% change	
		FY22F	FY23F	FY22F	FY23F	FY22F	FY23F
CPO price	MYR/MT	5,000	3,500	5,000	3,500		
ASP net of tax	IDR/Kg	12,100	9,400	12,100	10,000		
Revenue	IDR bn	7,293	5,825	7,293	6,149	0%	-5%
Gross profit	IDR bn	4,102	3,036	4,102	3,361	0%	-10%
EBIT	IDR bn	3,326	2,297	3,326	2,611	0%	-12%
Net profit	IDR bn	2,685	1,966	2,685	2,247	0%	-13%

Net profit margin	%	36.8%	33.7%	36.8%	36.5%	0%	-8%

Source: KISI, Company

London Sumatra Plantation (LSIP) – Downgrade to HOLD call with a lower TP of IDR1,300sh (from previously IDR1,900/sh), offering a 14% upside. Our DCF based TP implies 9.2x FY22F PE (around -0.5std dev from its 5-yr mean) and USD5,899 EV/Ha. Despite the recent CPO price appreciation, LSIP’s valuation has not been reflecting potential earning improvement and LSIP’s EV per Ha is close to the current replacement cost of USD6,000/Ha. LSIP is a pure play on CPO, similar to SSMS, and has a strong balance sheet with zero debt. Therefore, LSIP should be able to carry out aggressive replanting to replace its old mature estate.

Under the new price assumption and new tax regulation, we would see a slightly higher revenue of 5.5% in FY22F and lower revenue by 7.5% in FY23F respectively. The strong CPO price and cost-effectiveness will also result in a higher GPM of 40%/41% in FY22F and FY23F respectively. As a result, we adjusted our earnings to IDR967bn and IDR768bn in FY22F/FY23F.

Table 5. LSIP earnings assumption change

Assumptions	Unit	Revised new tax		Previous		% change	
		FY22F	FY23F	FY22F	FY23F	FY22F	FY23F
CPO price	MYR/MT	5,000	3,500				
ASP net of tax	MYR/MT	3,800	3,100	3,500	2,800		
Revenue	IDR bn	4,593	3,881	4,354	4,197	5.5%	-7.5%
Gross profit	IDR bn	1,808	1,580	1,395	1,123	29.6%	40.7%
EBIT	IDR bn	1,153	904	1,130	845	2.1%	6.9%
Net profit	IDR bn	967	768	940	713	2.9%	7.7%

Gross margin	%	39.4%	40.7%	32.0%	26.8%	23%	52%
EBIT margin	%	25.1%	23.3%	26.0%	20.1%	-3%	16%
Net profit margin	%	21.1%	19.8%	21.6%	17.0%	-3%	16%

Source: KISI, Company

Dharma Satya Nusantara (DSNG) – Maintain BUY with a lower TP of IDR650/sh (from previously IDR1,000/sh). Our DCF-based TP implies 7.3x FY22F PE (-0.5 std dev of its 5-yr mean PE). We like DSNG for its soon-to-be reaching prime estate profile with an average age of 12yr (similar with SSMS and TAPG) but with a lower FY22F ROE of 13% compared to those. DSNG is also aware of its ESG presence with 84%/68% of its plantation having the ISPO/RSPO certification and is also ranked 7th worldwide on SPOTT with a total score of 85.9%.

Under the new price assumption and new tax regulation, we adjust revenue to IDR8,534bn and IDR7,429bn in FY22F/FY23F respectively. The strong CPO price will also result in a higher GPM of 36%/36% in FY22F/FY23F respectively. As a result, we adjusted our earnings to IDR944bn and IDR799bn in FY22F/FY23F.

Table 6. DSNG earnings assumption change

Assumptions	Unit	Revised		Previous		% change	
		FY22F	FY23F	FY22F	FY23F	FY22F	FY23F
CPO price	MYR/MT	5,000	3,500				
ASP net of tax	MYR/MT	3,800	3,100	3,500	2,800		
Revenue	IDR bn	8,534	7,429	8,393	8,096	1.7%	-8.2%
Gross profit	IDR bn	2,325	2,053	2,348	2,155	-1.0%	-4.7%
EBIT	IDR bn	1,518	1,206	1,523	1,284	-0.3%	-6.1%
Net profit	IDR bn	944	799	891	743	5.9%	7.5%
Margin							
Gross margin	%	35.9%	35.9%	28.0%	26.6%	28%	35%
EBIT margin	%	27.0%	27.0%	18.1%	15.9%	49%	70%
Net profit margin	%	18.4%	11.5%	10.6%	9.2%	74%	25%

Source: KISI, Company

Triputra Agro Persada (TAPG) – Maintain BUY with a lower TP of IDR1,100/sh(from IDR1,200/sh), offering a 33% upside. Our DCF-based TP implies 7.2x FY22F PE (at SSMS's 3-yr mean PE). We think TAPG should be trading at a premium driven by its high yielded plantation profile (similar to SSMS), high FY22F ROE of 31%, and awareness towards ESG as it is the only Indonesian plantation company to hold the ESG certification. Moreover, TAPG's large planted oil palm area of 159,656Ha and the young prime palm oil age will provide significant growth upside going forward.

Under the new price assumption and new tax regulation, we would see a higher revenue of 25%/4% in FY22F and FY23F respectively from our previous price assumption. The strong CPO price will also result in a higher GPM of 41%/30% in FY22F and FY23F respectively. As a result, we adjusted our earnings to IDR3.026bn and IDR1.920bn in FY22F/FY23F.

Table 7. TAPG earnings assumption change

Assumptions	Unit	Revised		Previous		% change	
		FY22F	FY23F	FY22F	FY23F	FY22F	FY23F
CPO price	MYR/MT	5,000	3,500				
ASP net of tax	MYR/MT	3,800	3,100	3,500	2,800		
Revenue	IDR bn	9,496	7,848	7,632	7,585	24.4%	3.5%
Gross profit	IDR bn	3,901	2,354	2,175	2,124	79.4%	10.8%
EBIT	IDR bn	3,329	1,737	1,597	1,499	108.5%	15.9%

Net profit margin	%	31.9%	24.5%	17.3%	15.6%	84%	57%

Source: KISI, Company

Astra Agro Lestari (AALI) – Downgrade to HOLD with TP at IDR8,310/sh (from previously IDR13,100/sh). We utilize DCF with WACC of 12.1% to arrive at the fair value, implying a 9.7x FY22F PE (-1 std dev of its 5-yr mean). Despite having one of the biggest plantation areas in Indonesia, we view that AALI is fairly valued at the current level on the back of 1) aging trees, 2) weak FFB and CPO production, and 3) soft GPM.

Under the new price assumption and new tax regulation, we would see a higher revenue by 13%/2% in FY22F/FY23F respectively from our previous price assumption. The strong CPO price will also result in a higher GPM of 17% in FY23F respectively. As a result, we adjusted our earnings to IDR1,666bn and IDR1,018bn in FY22F/FY23F.

Table 8. AALI earnings assumption change

Assumptions	Unit	Revised		Previous		% change	
		FY22F	FY23F	FY22F	FY23F	FY22F	FY23F
CPO price	MYR/MT	5,000	3,500

III. No concern on biodiesel fund

We calculate that the biodiesel fund collected from the export levy amounted to ~IDR37tn in 1H22 and the fund needed to cover the index price spread between biodiesel price and diesel price stood around ~IDR26tn in the same period. On July22, we finally see that the price spread has flattened to only IDR124/ltr due to the normalizing domestic CPO price and at current rate, we estimate the **fund needed on 2H22F will decrease to around ~IDR3tn**. There should **not be any problem to run the biodiesel B35 program should the government decide to extend the export levy exemption until the end of 2022**. Furthermore, this should help giving upward pressure for domestic CPO price as it currently reflects a discount of global price with total export tax, which eventually should help boost FFB price.

Disclaimer

This Research Report ("Report") is prepared by PT Korea Investment and Sekuritas Indonesia, or its subsidiaries or its affiliates ("KISI").

By receiving this Report, you confirm that: (a) you have previously requested KISI to deliver this Report to you and you are legally entitled to receive the Report in accordance with Indonesian prevailing laws and regulations, and (b) you have fully read, understood and agreed to be bound by and comply with the terms of this Report as set out below. Your failure to comply with the terms below may constitute a violation of law.

All the material presented in this Report is under copyright to KISI. This Report is strictly confidential and is for private circulation only to clients of KISI. This Report is being supplied to you strictly on the basis that it will remain confidential and that you will maintain its confidentiality at all times. None of the parts of this material, nor its contents, may be copied, photocopied, or duplicated in any form of by any means or altered in any way, or transmitted to, or distributed to any other party without prior written consent of KISI.

This Report is based on the information obtained by KISI from sources believed to be reliable, however KISI do not make representations as to their accuracy, completeness or correctness. This Report is prepared for general circulation and for information purposes only and under no circumstances should it be considered or intended as an offer to sell or a solicitation of an offer to buy the securities referred to herein. KISI accepts no liability for any direct, indirect and/or consequential loss (including any claims for loss of profit) arising from the use of the material presented in this Report and further communication given or relied in relation to this document.

This Report is intended for circulation among KISI' clients only and does not consider any specific investment objectives, financial situation and the particular needs of any specific person who may receive this Report. The entire content of this Report is not and cannot not be construed or considered as an offer, recommendation, invitation or solicitation to enter into any transaction (including trading and hedging) relating to the securities, other financial instruments, and other form of investments issued or offered by the company(ies) covered in this Report. It is your own responsibility to: (a) independently evaluate the content of this Report, (b) consider your own individual investment objectives, financial situation and particular needs, and (c) consult your own professional and financial advisers as to the legal, business, financial, tax and other aspects before participating in any transaction in respect of the securities of company(ies) covered in this Report.

This report is not to be relied upon in substitution for the exercise of independent judgement. Past performance and analysis should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, valuations, opinions, forecasts, and estimates contained in this report reflects a judgment at its original date of publication by KISI and are subject to change without notice, its accuracy is not guaranteed or it may be incomplete.

The views expressed in this Report reflect the personal views of the individual analyst(s) at KISI about the securities or company(ies) mentioned in the Report and the compensation of the individual analyst(s), is, or will be directly or indirectly related to the performance of KISI' activities. KISI prohibits the individual analyst(s) who prepared this Report from receiving any compensation, incentive or bonus based on specific investment banking transactions or for providing a specific recommendation for, or view of, a particular company (including those covered in the Report). However, the individual analyst(s) may receive compensation based on the scope of his/their coverage of company(ies) in the performance of his/their duties or the performance of his/their recommendations.

In reviewing this Report, you should be aware that any or all of the above activities of KISI and its officers, directors and employees, among other things, may give rise to real or potential conflicts of interest. KISI and its officers, directors and employees, including persons involved in the preparation or issuance of this report, may, to the extent permitted by law, from time to time participate or invest in financing transactions with the issuer(s) of the securities mentioned in this report, perform services for or solicit business from such issuers, and/or have a position or holding, or other material interest, or effect transactions, in such securities or options thereon, or other investments related thereto. In addition, it may make markets in the securities mentioned in the material presented in this report. KISI may, to the extent permitted by law, act upon or use the information presented herein, or the research or analysis on which they are based, before the material is published.

Please note that the securities of the company(ies) covered in this Report might not be eligible for sale in all jurisdictions or to all categories of investors. The availability of those securities and your eligibility to invest in those securities will be subject to, among others, the prevailing laws of the relevant jurisdiction covering those securities. Furthermore, the value and income of any of the securities covered in this Report can fall as well as rise and an investor (including you) may get back less than invested. Future returns are not guaranteed, and a loss of original capital may be incurred.
